VM-Series and Azure Application Gateway Template Release Notes

Revision Date: December 15, 2016

Review important information about open issues and workarounds, and issues that are addressed in the current version of the template.

What's New

The VM-Series and Azure Application Gateway Template on GitHub allows you to provision the following resources in one streamlined flow:

- Azure Application Gateway as external load balancer.
- Two VM-Series firewalls in an Availability Set.
- Azure Load Balancer as internal load balancer.
- Two sample backend web servers in another Availability Set.

Known Issues

If you have deployed the prerelease (beta) version of the template (content version 1.0.0.2 in the JSON template), thank you for your participation. To obtain technical support, delete the resources deployed using the beta version and use the release version (content version 1.0.0.0) of the template on GitHub.

- The VM-Series firewalls in template version 1.0.0.0 use PAN-OS 7.1.1. Get the PAN-OS 7.1 Release Notes for known issues.
- For recent critical updates on a given PAN-OS release, refer to https://live.paloaltonetworks.com/t5/Articles/Critical-Issues-Addressed-in-PAN-OS-Releases/ta-p/52882.

Related Documentation

For help with deploying the template, refer to the Deploy the VM-Series and Azure Application Gateway Template in the VM-Series Deployment Guide.

For more information on our products, use the Technical Documentation portal or search the documentation:

- PAN-OS Administrator's Guide—Provides the concepts and solutions to get the most out of your Palo Alto Networks next-generation firewalls. This includes taking you through the initial configuration and basic set up on your Palo Alto Networks firewalls.

- Panorama Administrator's Guide—Provides the basic framework to quickly set up the Panorama™ virtual appliance or an M-Series appliance for centralized administration of the Palo Alto Networks firewalls.

- VM-Series Deployment Guide—Provides details on deploying and licensing the VM-Series firewall on all supported hypervisors. It includes example of supported topologies on each hypervisor.

- Online Help System—Detailed, context-sensitive help system integrated with the firewall web interface.

Requesting Support

For contacting support, for information on support programs, to manage your account or devices, or to open a support case, refer to https://www.paloaltonetworks.com/support/tabs/overview.html.
